

# PERFORMING A NETWORK VULNERABILITY SCAN WITH OPENVAS

**Tools : KALI LINUX**

**Site :** <https://127.0.0.1:9392>

OpenVAS (Open Vulnerability Assessment System) is an open-source framework for vulnerability scanning and management. It's part of the Greenbone Vulnerability Manager (GVM) suite, often used to assess systems for vulnerabilities and ensure network security.

OK: OpenVAS Scanner is present in version 23.13.1.
OK: Notus Scanner is present in version 22.6.4.
OK: Server CA Certificate is present as /var/lib/gvm/CA/servercert.pem.
Checking permissions of /var/lib/openvas/gnupg/*
OK: gnupg owns all files in /var/lib/openvas/gnupg/*
OK: redis-server is present.
OK: scanner (db_address setting) is configured properly using the redis-server socket: /var/run/redis-ovpn
as/redis-server.sock
OK: the mqtt_server_uri is defined in /etc/openvas/openvas.conf
OK: _gvm owns all files in /var/lib/openvas/plugins
OK: NVT collection in /var/lib/openvas/plugins contains 93151 NVTs.
OK: The notus directory /var/lib/notus/products contains 472 NVTs.
Checking that the obsolete redis database has been removed
OK: No old Redis DB
OK: ospd-openvas service is active.
OK: ospd-openvas is present in version 22.7.1.
Step 2: Checking GVMDB Manager ...
OK: GVM Manager (gvmdb) is present in version 24.0.0.
Step 3: Checking Certificates ...
OK: GVM client certificate is valid and present as /var/lib/gvm/CA/clientcert.pem.
OK: Your GVM certificate infrastructure passed validation.
Step 4: Checking data ...
OK: SCAP data found in /var/lib/gvm/scap-data.
OK: CERT data found in /var/lib/gvm/cert-data.
Step 5: Checking PostgreSQL DB and user ...
OK: PostgreSQL version and default port are OK.
gvmdb | _gvm | UTF8 | libc | en_US.UTF-8 | en_US.UTF-8 | | |
16440|pg-gvm|10|2200|f122.6||
OK: At least one user exists.
Step 6: Checking Greenbone Security Assistant (GSA) ...
OK: Greenbone Security Assistant is present in version 24.0.0-git.
Step 7: Checking if GVM services are up and running ...
OK: gvmdb service is active.
Starting gsad service
Waiting for gsad service
OK: gsad service is active.
Step 8: Checking few other requirements ...
OK: nmap is present.
OK: ssh-keygen found, LSC credential generation for GNU/Linux targets is likely to work.
OK: nsis found, LSC credential package generation for Microsoft Windows targets is likely to work.
OK: xsltproc found.
WARNING: Your password policy is empty.
SUGGEST: Edit the /etc/gvm/pwpolicy.conf file to set a password policy.
Step 9: Checking greenbone-security-assistant...
OK: greenbone-security-assistant is installed

It seems like your GVM-23.11.0 installation is OK.

**Greenbone Security Assistant**

Dashboards Scans Assets Resilience SecInfo Configuration Administration Help

### Advanced Task Wizard

**Quick start: Create a new task**

This wizard can help you by creating a new scan task and automatically starting it.

All you need to do is enter a name for the new task and the IP address or host name of the target, and select a scan configuration.

You can choose, whether you want to run the scan immediately, schedule the task for a later date and time, or just create the task so you can run it manually later.

In order to run an authenticated scan, you have to select SSH and/or SMB credentials, but you can also run an unauthenticated scan by not selecting any credentials. If you enter an email address in the "Email report to" field, a report of the scan will be sent to this address once it is finished.

For any other setting the defaults from "My Settings" will be applied.

**Task Name** New Quick Task

**Scan Config** Full and fast

**Target Host(s)** 127.0.0.1

☒ Start Immediately

☐ Create Schedule:

01/23/2025 at 15 h 6 m

Coordinated Universal Time/UTC

☐ Do not start automatically

**SSH Credential** -- on port 22

**SMB Credential** --

**ESXi Credential** --

**Email report to**

Cancel Create

Here we would be using openvas to perform a quick network vulnerability scan.

## **Installing and Setting Up OpenVAS (GVM)**

### **Install OpenVAS**

Run the following command to install OpenVAS:

```
sudo apt install openvas
```

1.

### **View Help Screen**

Check the help options with:

```
openvas -h
```

2.

### **Initialize GVM**

Since OpenVAS is now Greenbone Vulnerability Manager (GVM), initialize it with:

```
sudo gvm-setup
```

3.

- This downloads necessary plugins and may take some time.
- After installation, the terminal will display the admin password. Save this password securely.

### **Verify Installation**

Run the following to ensure the installation is complete:

```
sudo gvm-check-setup
```

4.

- If everything is OK, reboot your system.

### **Start GVM**

Use the command below to start GVM:

```
sudo gvm-start
```

5.

- Firefox will launch automatically at <https://127.0.0.1:9392>.
  - Accept the self-signed certificate warning.
  - Login using the username `admin` and the saved password.
- 

## Running a Network Vulnerability Scan

### 1. Access the Dashboard

- Once logged in, hover over the **Scans** tab and click **Tasks**.

### 2. Create a Scan Task

- Click the wand icon at the top-left corner and select **Advanced Task Wizard**.
- Provide a name for the task and input your local network's subnet.
- Click **Create** to initiate the scan.

### 3. View Results

- After the scan completes, hover over the **Scans** tab and select **Results**.
- Review the vulnerabilities and their detailed descriptions, including remediation steps.
